# ClientLocker: 1-Page Plan

Author: Rajeshwari | Milestone 1 Plan

## Problem Statement (How Might We)

*How might we make sure every person at a busy accounting firm sees only the client files they are meant to see, while the partners always know who opened what?*

## Core User Actions

### 1. Partner Visibility

A partner logs in and sees every client and file across the entire organization.

### 2. Staff Assignment Isolation

A staff member logs in and sees only the specific clients assigned to them.

### 3. Client File Upload & Access

A staff member uploads a client's file securely and can open/verify it later.

### 4. Client Secure Magic Link

A client logs in with a secure email link and accesses only their own private files.

### 5. Access Revocation & Audit Trail

A partner removes someone's access and reviews the immutable activity audit log.

### Target Stack & Roadmap Note

Next.js 16, TypeScript, Tailwind CSS, Supabase (Database & Private Storage), Resend, GitHub Actions CI.
